

Legacy Software Rescue

The health of your core business applications is critical to the success of your business. No matter if page load times are taking too long or it's expensive to make changes, poor application performance can often result in a poor user experience, inefficient operations and even lost revenue. At Synetec we can provide help with improvement; whether new features are too slow, performance isn't scaling as quickly as your demands, or your existing supplier (or internal team) isn't able to cope and meet your organisational needs, or stability; and you're suffering from buggie code to an unreliable system and downtime.

We offer a range of services that can help you on your journey to fix and modernise your bespoke legacy applications.

Application Health Check
